

TECHNICAL DATA SHEET

Product name: Adorable Fragrance Oil

Olfactory classification: Adorable Fragrance Oil belongs to the floral–fruity–gourmand fragrance family, featuring an elegant, sweet, and powdery character. The composition combines rich floral notes with fruity and vanilla accords, supported by a warm musky-woody base that provides depth and long-lasting performance.

Fragrance oil description: The composition is sophisticated, feminine, and well-balanced, with a medium to strong intensity and stable diffusion. The fragrance character is floral, soft, and sensual, with a pronounced effect of elegance and smoothness. The opening is created through a blend of violet, floral accords, and champaca. Violet delivers a delicate powdery sweetness, floral accords add freshness and lightness, while champaca introduces an exotic and slightly spicy floral depth, creating a refined and pleasant first impression. In the heart of the composition, a rich floral-fruity accord develops, dominated by rose, orchid, and plum. Rose contributes classic floral elegance, orchid adds exotic fullness and sophistication, while plum introduces juicy fruity sweetness and smoothness. This combination creates an expressive and harmonious fragrance heart. The base structure is built around vanilla, blackberry, white musk, and amaranth wood. Vanilla provides warmth and gourmand sweetness, blackberry extends the fruity character of the composition, while white musk enhances softness and longevity. Amaranth wood introduces a subtle woody and slightly spicy depth that stabilizes the dry-down. The finish is rich, smooth, and long-lasting, with a pronounced sensation of warmth and elegance. The dominant accords of this composition include floral elegant, fruity sweet, musky powdery, and vanilla gourmand profiles, which together create a rich and commercially attractive fragrance character. The floral and fruity aspects remain dominant, while the base ensures stability and prolonged fragrance persistence.

Application: Adorable Fragrance Oil is intended for use in various scented formulations, including scented candles, wax melts, and solid soaps. The recommended concentration for scented candles is between 7% and 10%, while for wax melts the recommended dosage ranges from 10% to 15%. In solid soap formulations, the recommended usage level is between 3% and 5%.

TECHNICAL DATA SHEET

For wax-based formulations, it is recommended to add the fragrance into liquid wax at a temperature between 72 °C and 75 °C, with gentle stirring for approximately 2 minutes to achieve uniform dispersion. For other formulation types, the IFRA certificate should be consulted in order to determine the maximum permitted concentration levels. The fragrance demonstrates good stability and uniform diffusion, with a pronounced and long-lasting floral-gourmand character.
