

TECHNICAL DATA SHEET

Bredele Fragrance Oil

Product Name: Bredele Fragrance Oil

Olfactory Classification: Bredele Fragrance Oil belongs to the Gourmand–Spicy fragrance family, characterized by a warm, creamy, and bakery-inspired profile. The composition combines milky, spicy, and citrus notes with a rich base of vanilla, sugar, and butter, creating an intense and festive gourmand character.

Fragrance Oil Description: The composition is rich, warm, and pleasantly enveloping, with medium to strong intensity and stable diffusion. The fragrance profile is sweet, spicy, and distinctly gourmand, evoking the sensation of freshly baked festive cookies.

The opening is formed through a combination of milk, ginger, and anise. Milk provides a creamy and soft sweetness, ginger contributes warm aromatic spiciness, while anise introduces a characteristic sweet-spicy nuance that enriches the initial impression.

In the heart of the composition, a gourmand bakery accord develops, dominated by biscuit, orange, and nutmeg. Biscuit delivers a warm baked dough and cookie-like character, orange adds a citrus brightness that balances the sweet and spicy tones, while nutmeg introduces warm woody-spicy depth. This combination forms a rich and aromatic heart with a pronounced festive character.

The base structure is built around vanilla, sugar, and butter. Vanilla provides warm and enveloping sweetness, sugar contributes crystalline gourmand richness, while butter adds a creamy and indulgent finish. The dry-down is intense, soft, and long-lasting, with a pronounced sensation of warmth and sensory comfort.

The dominant accords of this composition include gourmand bakery, spicy warm, vanilla creamy, and buttery sweet facets, which together create a rich and highly commercially attractive fragrance profile. Gourmand and spicy aspects remain dominant throughout the fragrance evolution, while the base contributes stability and extended longevity.

Application: Bredele Fragrance Oil is intended for use in fragrance formulations, including scented candles, wax applications, and other perfumery products. Individual

TECHNICAL DATA SHEET

testing is recommended in order to determine the optimal concentration depending on the type of base and the desired fragrance intensity.

For wax-based formulations, it is recommended to incorporate the fragrance during the appropriate liquid phase in order to achieve even dispersion. For maximum permitted concentrations, consultation of the IFRA certificate is required.

The fragrance demonstrates good stability and uniform diffusion, with a pronounced and long-lasting gourmand-spicy character.
