

TECHNICAL DATA SHEET

Cedar and Eucalyptus – Reed Diffuser Refill

Product name: Cedar and Eucalyptus – Reed Diffuser Refill

Olfactory classification:

Cedar & Eucalyptus Fragrance Oil belongs to the woody–aromatic fragrance family, characterized by a fresh, camphoraceous, and resinous profile. The composition combines intense green and aromatic notes with a warm woody–balsamic base, creating a balanced character between freshness and depth.

Fragrance oil description:

The composition is powerful, fresh, and distinctly structured, with a medium to strong intensity and stable diffusion in interior spaces. The fragrance profile is energetic, natural, and slightly robust, with a pronounced forest-fresh character. The opening is formed through a combination of pine, eucalyptus, and an aldehydic accord. Pine provides a sharp resinous freshness, eucalyptus introduces a cooling camphoraceous note, while the aldehydic accord contributes a clean and crystalline impression, creating a strong and invigorating initial effect.

In the heart of the composition, a more complex woody–aromatic accord develops, dominated by leather accord, cedarwood, thyme, and patchouli. The leather accord provides a dry smoky structure, cedarwood establishes a stable woody foundation, while thyme and patchouli contribute aromatic depth and earthy nuances. Together, these notes create a strong and characteristic fragrance core.

The base structure is founded on vanilla, moss, labdanum, and clove. Vanilla provides subtle warmth and smoothness, moss introduces a damp earthy character, while labdanum contributes resinous richness and depth. Clove adds a discreet spicy sharpness, creating a rich and long-lasting dry-down with a pronounced natural character.

The dominant accords of this composition include aromatic fresh, woody resinous, green camphor, and spicy warm facets, which together create a strong and commercially recognizable fragrance profile. The fresh and aromatic aspects dominate the opening, while the base ensures stability and lasting performance.

TECHNICAL DATA SHEET

Application:

Cedar & Eucalyptus Fragrance Oil is intended for use in reed diffusers as a ready-to-use refill, where the formulation has already been optimized for direct application without additional dilution. Within this system, it provides even and long-lasting fragrance diffusion throughout interior spaces. Use with rattan reeds is recommended, with occasional reed turning to maintain continuous evaporation and stable scent distribution. Application in other product types is not recommended due to the specific formulation and technological limitations.
