

TECHNICAL DATA SHEET

Ylang and Jasmine – Reed Diffuser Refill

Product name: Ylang and Jasmine – Reed Diffuser Refill

Olfactory classification:

Ylang & Jasmine Fragrance Oil belongs to the floral-oriental fragrance family, characterized by a warm, rich, and subtly spicy profile. The composition is built around intense floral notes, supported by fruity and woody-musky accords that provide depth and long-lasting performance.

Fragrance oil description:

The composition is rich, elegant, and distinctly floral, with a medium to strong intensity and stable diffusion in interior spaces. The fragrance profile is warm, sophisticated, and soft, with a pronounced impression of floral fullness. The opening is formed through a combination of jasmine, bergamot, and clove. Jasmine provides an intense and luxurious floral note, bergamot introduces freshness and brightness, while clove contributes a discreet spicy nuance, creating a balanced and lively initial impression.

In the heart of the composition, a pronounced floral-fruity accord develops, dominated by ylang-ylang, peach, and tuberose. Ylang-ylang provides a warm, exotic, and slightly sweet floral structure, while peach contributes soft fruity fullness. Tuberose introduces depth and intensity, creating a rich and multilayered fragrance core.

The base structure is founded on musk, amber, and sandalwood. Musk provides softness and lasting persistence, amber contributes warmth and smooth roundness, while sandalwood introduces a creamy woody foundation. The dry-down is long-lasting, enveloping, and elegant, with a pronounced sensation of floral warmth and comfort.

The dominant accords of this composition include floral rich, exotic warm, fruity soft, and musky creamy facets, which together create a complex and commercially attractive fragrance profile. The floral aspect remains dominant, while the base ensures stability and fragrance longevity.

TECHNICAL DATA SHEET

Application:

Ylang & Jasmine Fragrance Oil is intended for use in reed diffusers as a ready-to-use refill, where the formulation has already been optimized for direct application without additional dilution. Within this system, it provides even and long-lasting fragrance diffusion throughout interior spaces. Use with rattan reeds is recommended, with occasional reed turning to maintain continuous evaporation and stable scent distribution. Application in other product types is not recommended due to the specific formulation and technological limitations.
