

TECHNICAL DATA SHEET

Product Name: 211 Candle Fragrance Oil.

Olfactory classification: 211 Candle Fragrance Oil belongs to the vanilla, fruity and floral gourmand fragrance groups. The composition combines refreshing citrus notes with creamy dessert accords and a warm vanilla base, creating a sweet, modern and exceptionally pleasant fragrance.

Fragrance oil description: 211 Candle Fragrance Oil is characterised by a rich gourmand profile in which citrus freshness blends harmoniously with creamy notes of vanilla and caramel. The fragrance has medium to high intensity, excellent diffusion and a long-lasting trail. The opening presents a vibrant combination of lime, bergamot and pineapple. Lime provides refreshing citrus freshness, bergamot introduces an elegant, subtle bitterness, while pineapple contributes juicy tropical sweetness and fruity brightness. The heart consists of vanilla flower, rice pudding and crème caramel. Vanilla flower brings delicate floral elegance, rice pudding provides rich milky creaminess, while crème caramel enriches the composition with warm caramel accords, creating a soft and distinctly gourmand character. The base notes comprise vanilla, musk and liquorice wood. Vanilla dominates with warm, creamy sweetness, musk provides a soft and long-lasting finish, while liquorice wood introduces a subtle woody and spicy nuance that rounds out the composition and gives it additional depth. The dominant accords include sparkling citrus, tropical fruits, creamy dessert, vanilla, soft musk and gourmand woods. The fragrance leaves a pleasant, warm and luxurious impression reminiscent of sophisticated desserts with a refreshing fruity touch.

Applications: 211 Candle Fragrance Oil is intended for the manufacture of scented candles, wax melts, aroma diffusers, air fresheners and other fragranced formulations. It is particularly suitable for gourmand, vanilla and fruity collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
