

TECHNICAL DATA SHEET

Product Name: 220 Fragrance Oil.

Olfactory classification: 220 Fragrance Oil belongs to the powdery floral, soft amber and clean musk fragrance groups, with a pronounced powdery, floral and warmly sensual character. The composition combines notes of heliotrope, cotton flower, spicy accords, rose, jasmine, violet, amber, vanilla and white musk, creating a sophisticated fragrance with a soft floral heart and an elegant amber-musky base.

Fragrance oil description: The composition is delicate, elegant and distinctly powdery, with airy floral nuances and a warm, creamy finish. The fragrance has medium to strong intensity, very good diffusion and a long-lasting, sophisticated trail. The opening is built around heliotrope, cotton flower and spicy accords. Heliotrope provides powdery, subtly vanilla-like and almond-like nuances, while cotton flower contributes clean, light and airy softness. Spicy accords introduce discreet warmth and additional complexity, creating a pleasant and elegant introduction. Rose, jasmine and violet unfold in the heart. Rose provides classic floral fullness and romantic elegance, while jasmine contributes a richer and more sensual floral character. Violet introduces a delicate powdery and subtly earthy nuance, further deepening the composition's sophisticated floral structure. The base is built around amber, vanilla and white musk. Amber provides warm balsamic fullness and pleasant depth, while vanilla contributes creamy sweetness and softness. White musk rounds out the composition with a clean, silky and long-lasting trail. The dominant accords include powdery heliotrope, cotton flower, floral bouquet, warm amber and soft white musk. The fragrance leaves a delicate, warm and elegantly powdery impression.

Applications: 220 Fragrance Oil is intended for the manufacture of scented candles, wax melts, diffusers, air fresheners and other fragranced formulations. It is particularly suitable for powdery, floral, ambery and clean musk collections. The recommended concentration depends on the type of base and the desired fragrance intensity, subject to prior compatibility, stability and diffusion testing. The relevant IFRA Certificate should be consulted to determine the maximum permitted concentrations.
